Italian made glass for Architecture and Design

TRANSPARENCY AND TEXTURE

together make glass a living material.

► **This crystalline material comes to life** when it intercepts light. This is why Madras® chemical etching, which modifies the surface of the glass in depth, generates such unique visual and tactile effects through the refraction of light on the finely textured parts, thus enlivening the entire surface. The glass element - be it a shower or a wall - takes on body while maintaining transparency and lightness.

► **Lines, geometries, gradient, 3D:** the Madras® range dedicated to transparency is really wide and covers all the "style" requirements of this particular ambience and its use. The choice of texture will depend on the desired impact (greater or lesser) of the glass and the degree of transparency required: the transparency effect increases in proportion to the surface area of non-etched glass.

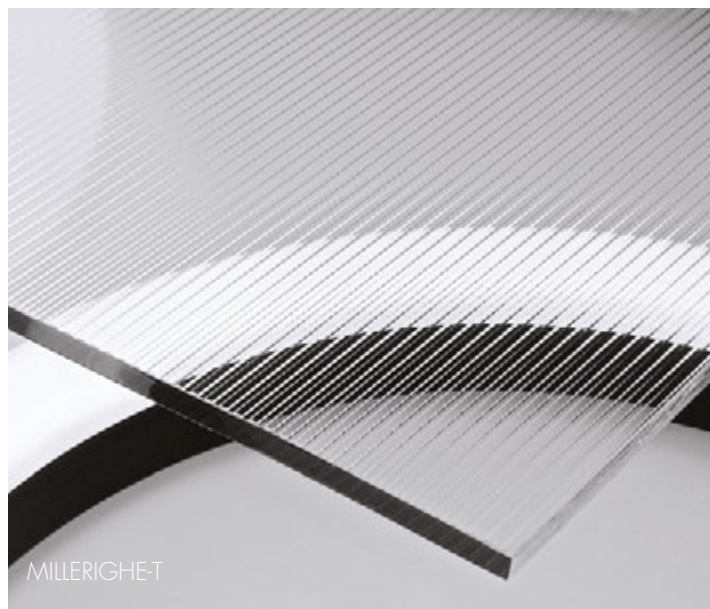

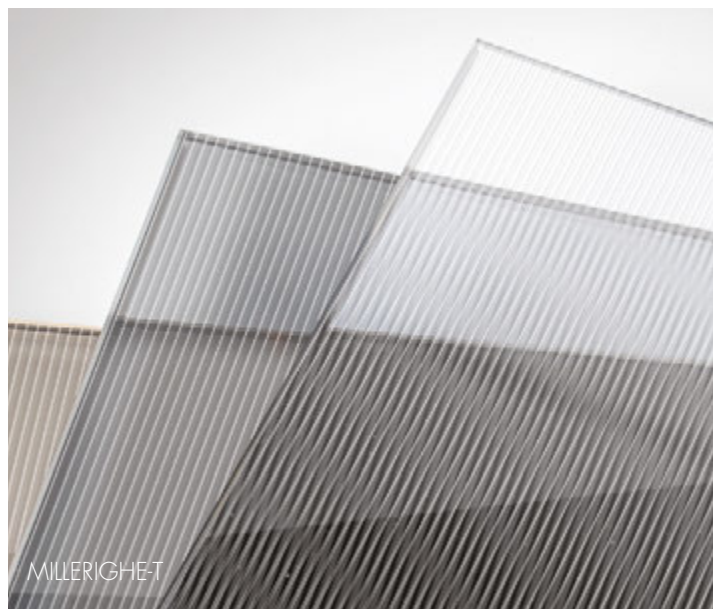

► **Drawing volumes with light.** Light diffused by a LED source

embedded in the thickness of the glass enhances the Madras® finish. It's the etching in fact that intercepts and reflects the light to become luminous itself. Choice of colour is important here: to obtain maximum light transmittance it's preferable to use extra-clear glass.

► **Heat and mechanical transformations.** All Madras® products made of monolithic float glass can be tempered and laminated with PVB or EVA for safety applications.

► **Applications and installations.** Due to the ample choice offered by this range and also its ease of maintenance, Madras® glass with transparent finishes is used – and highly appreciated - by interior designers above all for showers and walls, for both individual projects and serial production.

TECHNICAL DESCRIPTION

Plate sizes*: 2250/2400 x 3210 mm

Thicknesses: 4/5/6/8/10 mm

Weight: 2.5 kg/m² per mm thickness

Colours:

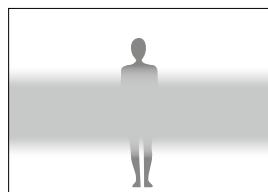

clear  extra-clear  bronze  grey 

Availability of standard colours/thicknesses is subject to change. Please verify when ordering.

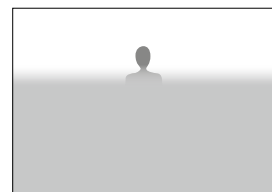

*Fluido-T: 1610 x 3350/3210 mm / Plissé-T: 4-6 mm: 2000 x 3210 mm; 8 mm: 2040 x 3300 mm. Colour: clear.

We recommend checking the suitability of the chosen Madras® article by consulting the relative **technical data sheet** on our website: www.madrasglass.co.uk/catalogue, section All products.
