With the introduction of satin-finish glass over 50 years ago now, **Madras® products** made it possible to manage the level of privacy in the designing of spaces.

Madras® Nuvola products offer opportunities to protect privacy levels without limiting the feeling of space. Satin finishing is produced by a special chemical process that makes surfaces perfectly smooth, scratch- and fingerprint-resistant and easy to clean. The progressive finish, on one side of the glass, passes seamlessly and very gradually from translucent screening to transparency.

Madras® Nuvola interacts with light to diffuse it in the satin-finished part and allows visibility, where necessary, to create a sense of spaciousness. This effect cannot be imitated by other glass processing techniques.

Technical description.

Plate sizes:

2250/2400 x 3210 mm.

Standard thicknesses:

max 12 mm.

Weight:

2.5 kg/m² per mm thickness.

Standard colours:

clear and extra-clear.

Compatible processing:

all mechanical and heat processes (eg. tempering, laminating, bending).
