MADRAS® GLASS, DESIGN 2021: FOR DOORS THAT LOVE QUALITY.

► Classic design, Madras® quality. Madras® Design 2021 for doors satisfies the key requisites of glass for this particular application with the superior quality of its processing technique. Other processes, such as sanding and painting ("fake" satin-finishes), are likely to deteriorate with time and use in fact.

► Madras® satin finishing and chemical etching, unlike painting, permanently modify the surface of glass, but that's not all: they enable unique visual and tactile effects to be produced. Light is refracted and diffused with a rare delicacy thanks to the fineness of the texture. For the same reasons, cleaning is far easier too. And the beauty of the products lasts longer.

► Different finishes for different degrees of vision: to effectively block vision whilst allowing light to pass from one ambience to another, products with a satin-finish ground are to be preferred. In this case, the textures are very slightly in relief and pleasing to the touch.
Satin patterns on a transparent ground perfectly smooth on the surface, on the other hand, make it possible to look from one side of the glass to the other, while the double-sided versions create dynamic visual effects.

► Heat and mechanical transformations. All Madras® products made of monolithic float glass can be tempered and laminated with PVB or EVA for safety applications. Certain models can also be produced using already certified laminated float.

ECOSAT SCREEN is ideal for doors in high quality satin glass. Produced by unique Madras® chemical processing techniques, its special finish ensures certified maximum resistance to scratches and stains.

ORIZZONTI is characterized by a very simple and refined pattern, having two elegant opaque satin bands setting off a central band with a more luminous sparkling satin finish running between them.

RIGATO MATÉ has simple and elegant satin bands alternating with thin transparent lines.

ROVERE produces a striking decorative effect inspired by wood grain but in a modern graphical style. The version with two different satin-finish tones is preferable where screening is required.

ROVERE-M is an alternative version providing a see-through solution.

TECHNICAL DESCRIPTION

Plate sizes: 2400* x 3210 mm (useful 2360 x 3170 mm)
*Ecosat Screen 2250/2400 x 3210 mm (useful 2210/2360 x 3170 mm)
Thicknesses: 4/5/6/8/10 mm
Weight: 2.5 kg/m² per mm thickness

Colours: clear extraclear bronze grey
